DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Attorney Frank J. Jordan on 11/16/2005.

The application has been amended as follows:

1. Cancel claims 1, 3, 5-13, 15 and 16.
2. Add claim 14 to claim 2 as follows:

Claims 2. A small brushless motor comprising a stator base having a generally flat portion and a cylindrical portion extending from one side of said flat portion, said cylindrical portion being formed as a bearing housing, said cylindrical portion having an opening; a bearing for rotatably supporting a rotary shaft of a rotor mounted on said bearing housing; a stator core mounted in a fixed condition at the outside of said bearing housing; a magnet comprising a plurality of magnetic poles arranged to face said stator core; a rotor yoke having said magnet mounted thereon in a fixed condition and having the shaft disposed in the center thereof; a circuit substrate having a circuit juxtaposed to said flat portion on said one side of said flat portion; and a molded resin structure having one part

disposed over said opening of said cylindrical portion for receiving the thrust of the rotary shaft and another part disposed about said cylindrical portion, said stator core being mounted in a fixed condition on said other part of said molded resin structure, wherein said other part of said molded resin structure comprises integral engagement portions, and said circuit substrate comprises engagement sections engaged by said engagement portions, said engagement portions and engagement sections preventing relative rotational movement between said molded resin structure and said circuit substrate.

3. Cancel claim 14.

The following is an examiner's statement of reasons for allowance:

The Prior art does not provide alone or in combination a small brushless motor having a molded resin structure having one part disposed over an opening of a cylindrical portion for receiving the thrust of the rotary shaft and another part disposed about said cylindrical portion, said stator core being mounted in a fixed condition on said other part of said molded resin structure, wherein said other part of said molded resin structure comprises integral engagement portions and said circuit substrate comprises engagement sections engaged by said engagement portions preventing relative rotational movement between said molded resin structure and said circuit substrate.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
